Learning from other countries: an on-call facility for health care policy

Ellen Nolte, Stefanie Ettelt, Sarah Thomson¹, Nicholas Mays

Health Services Research Unit, London School of Hygiene and Tropical Medicine; ¹LSE Health, London School of Economics and Political Science, London, UK

Recognizing that robust information on health systems in other countries can provide valuable lessons for the English National Health Service, the Department of Health commissioned an academic team to provide an 'On-call Facility for International Healthcare Comparisons' in 2005. This paper describes the work of this novel approach to informing policy and reviews the experience of the first two years. It illustrates the well-documented challenges of comparative analysis of health systems. One important issue is understanding the health system context so as to interpret phenomena and draw appropriate policy conclusions. Other challenges include the potential tension between academic interest and rigour, and the need for timely analysis to inform the Department of Health's rapidly changing policy agenda. The diversity and nature of topics covered, as well as the rapid turn-around time have meant that the Facility has had to balance rigour and timeliness carefully to ensure the value and relevance of reports. A strong research base linked with an international network of country experts promotes the provision of high quality analyses at relatively low costs. However, such an arrangement can only be sustained if it provides scope for additional primary research. A formal evaluation of the influence on health care policy-making in England is not yet available. Such knowledge will be of crucial importance for the development of similar resources elsewhere.

About us

Research Team

- **Ellen Nolte** (Project Leader): Senior Lecturer, Health Services Research Unit, Department Policy, LSHTM
- **Stefanie Ettelt** (Researcher): Research Fellow, Health Services Research Unit, Department Policy, LSHTM
- **Athanasios Nikolentzos** (Researcher): Research Fellow, Health Services Research Unit, Health and Policy, LSHTM
- **Nicholas Mays** (Chair of the Steering Committee): Professor of Health Policy, Health Services Department of Public Health and Policy, LSHTM
- **Sarah Thomson** (Adviser): Research Fellow, LSE Health and Social Care, London School of Economics and Political Science and LSHTM, and Research Officer, European Observatory on Health Systems and Policies

Funder

The On-Call Facility for International Healthcare Comparisons is funded by the [Department of Health](#). Outputs, however, reflect the views of the authors and not necessarily those of the Department of Health.

Partners

Experts in 13 countries form the International Healthcare Comparisons Network. They contribute to the project by sharing experience of health policy developments, policy evaluations and indications of new policy thinking in their countries. The project also benefits from close cooperation with the European Observatory on Health Systems and Policies

Índice

1. Introducción: centrando el tema
2. Flujo de ideas y aprendizaje entre sistemas sanitarios: utilidad y riesgos.
3. Perspectiva comparada los sistemas de salud
4. Temas de especial actualidad en el contexto internacional:
 - Sostenibilidad
 - Gobernanza: buen gobierno
 - El reto de la cronicidad
 - Calidad-efectividad
 - “Factory medicine”
 - Cooperativas en los sistemas públicos integrados
 - Empoderamiento de los pacientes: pacientes más activos e informados
 - Potencial de los sistemas de información – TICs
 - Efectividad-Calidad
 - Profesionalismo y gobierno clínico
5. Reflexión final.

Sostenibilidad

- ¿Qué queremos decir con sostenibilidad de los sistemas públicos de salud?
- ¿Cuándo/por qué decimos que un sistema público de salud es o no es sostenible?
- 2 Dimensiones de la sostenibilidad:
 - Social–política: Apoyo y aceptación popular (y de las elites)
 - Económica (recursos)
 - ¿Lo podemos pagar? (*Affordability*)
 - Eficiencia Macro económica

Sobre la sostenibilidad ...

Canada's publicly funded health care system, as it is currently organized and operated, is not fiscally sustainable given current funding levels

(Kirby, 2002)

Medicare ... is as sustainable as Canadians want it to be

(Romanow, 2002)

Sostenibilidad de los sistemas públicos de salud en perspectiva global

- Reto permanente: la calidad de la práctica médica y un modelo adecuado de atención a las enfermedades crónicas:

“The health care model in the developed world is not sustainable with the rising tide of chronic disease”.

(Sir Liam Donaldson, CMO UK, May 2004)

- Hay un gran campo para mejorar la eficiencia (calidad y productividad) de los sistemas de salud
 - IOM, 2008: *Knowing What Works in Health Care*.
 - IOMA 1999: *Roadmap for the Nation; To err is Human*);

Sostenibilidad: la pregunta correcta

- La cuestión clave no es si los sistemas públicos de salud son sostenibles para la sociedad, si no al revés:
 - ¿hay alguna sociedad democrática que se pueda permitir no tener un buen sistema público de salud?
- Ello nos lleva a la pregunta correcta: ¿Cómo hace sostenibles los sistemas públicos de salud?

Sobre la sostenibilidad

“At its core, then, the debate over health care, in the United States as elsewhere, is less a pure macroeconomic issue than an exercise in the political economy of sharing.”

(Uwe E Reinhardt. Health Affairs, 23, no. 3 (2004): 10-25.

doi: 10.1377/hlthaff.23.3.10)

Buen gobierno

Buen gobierno corporativo de los servicios públicos de salud

1. Existencia de un órgano colegiado de gobierno (Consejo), diferenciado de la Dirección ejecutiva (órgano gestor);
2. Consejos con características que la experiencia ha demostrado que contribuyen a su efectividad:
 - (a) compuesto por miembros sin poder ejecutivo en la organización e independientes, sin intereses personales en ella;
 - (b) tamaño adecuado,
 - (c) consejeros con competencias relevantes para la organización,
 - (d) funcionamiento de un subcomité de auditoría y de otros subcomités formados por los consejeros según necesidades.;
3. Dirección ejecutiva (o Dirección-Gerencia):
 - (a) seleccionada por procesos transparentes,
 - (b) retribución con incentivos por desempeño.
4. Reglas de funcionamiento del Consejo y de la dirección ejecutiva, así como de la relación entre ambos, que respondan a estándares de los códigos de buen gobierno y buena gestión.

Seniors and the Health Care System: What Is the Impact of Multiple Chronic Conditions?

Analysis in Brief

Introduction

Concern about chronic condition care is growing as the prevalence of chronic conditions such as diabetes and high blood pressure increases with age, causing a disproportionate health burden on seniors—Canadians age 65 and older.¹ Patients with chronic conditions—in particular multiple chronic conditions, also called comorbidity—typically have poorer quality of life and require considerable health care resources. Effective prevention and management of chronic conditions is required, especially in the face of Canada's large boomer generation entering the senior age category.

This study examined the reported experiences of seniors in Canada being treated for chronic conditions in primary health care (PHC) settings. The results of the study can be used to enhance our understanding of patients' use of health care services and health status, the quality of patient-provider communication, patient self-management and medication management. This report is focused on seniors because they are more likely than younger people to have chronic conditions, especially comorbidities that can be complex and difficult to manage.

Key Findings

Healthy seniors need less health care. The amount of health care services seniors will use is largely driven by the number of chronic conditions they have, not their age.

- In each of the age groups (65 to 74, 75 to 84, and 85 and older), seniors with three or more reported chronic conditions had nearly three times the number of health care visits than seniors with no reported chronic conditions.

Who We Are

Established in 1984, CHIR is an independent, not-for-profit organization that provides essential information on Canada's health system and the health of Canadians. Funded by federal, provincial and territorial governments, we are guided by a Board of Directors made up of health leaders across the country.

Our Vision

To help improve Canada's health system and the well-being of Canadians by being a leading source of unbiased, credible and comprehensive information that will enable health leaders to make better-informed decisions.

Federal Identity Program

Publication of this report is made possible by financial contributions from Health Canada and provincial/territorial governments. The views expressed herein do not necessarily represent the views of Health Canada or any provincial or territorial governments.

www.chir.ca

Seniors and the Health Care System: What Is the Impact of Multiple Chronic Conditions?

http://secure.cihi.ca/cihiweb/products/air-chronic_disease_aib_en.pdf

- The 24% of seniors who reported living with three or more chronic conditions were responsible for 40% of health care use among Canadian seniors.
- Seniors with three or more chronic conditions reported using three times as many health care services as Canadians age 65 and older with no chronic conditions. Those with three or more chronic conditions also reported more than twice the rate of visits to a family doctor as seniors with only one chronic condition.
- Similar patterns of health care use existed among adults age 45 to 64; those with three or more chronic conditions made six times as many health care visits as those with no reported conditions.
- Seniors with three or more chronic conditions made three times as many visits to emergency departments as seniors with no reported chronic conditions.

The future need for care

Results from the LEV project

- **This report focuses on what options exist** for changing the picture in the future through better health, lower morbidity and a more efficient health- and elderly care system; i.e. a focus on the efficiency gap instead of the funding gap.
- SESIM Model (Ministry of Health and Social Affairs, Sweden)
 - It simulates how 300 000 individuals age from year to year up to 2050 what role their health plays for their future needs for health care and care for the elderly.

Figure 9. Percentage difference in age-standardised consumption of care and social services per individual in 2030 and 2050 in relation to 2010. Age standardisation means that the population in the three different scenarios has the same size and age composition.

Employee ownership in the NHS

Mutual models may help to deliver higher levels of performance

Although the coalition government's plans to put general practices in charge of commissioning have attracted widespread interest and comment, its proposals for provider reform are equally radical. By 2013 it is expected that all NHS trusts will have become foundation trusts, and that providers from the independent sector will play a bigger part in delivering services to NHS patients. The government also wants to encourage employee owned healthcare providers, with the aim of creating "the largest and most vibrant social enterprise sector in the world."¹

These plans are part of a broader programme of public service reform, at the heart of which is a concern to move

commitment to allow foundation trusts to go down this route. The white paper on NHS reform published in July stated that, "As all NHS trusts become foundation trusts, staff will have the opportunity to transform their organisations into employee-led social enterprises that they themselves control, freeing them to use their front-line experience to structure services around what works best for patients."¹ The implication is that, in future, foundation trusts will take different forms, with some retaining their current governance model involving multiple stakeholders while others become employee owned.

Several practical barriers may exist in the way of

Power to public sector workers

Employee owned co-operatives to enable public sector workers to become their own boss and deliver

Executive summary

A Conservative government will give public sector workers a powerful new right to form employee owned co-operatives to take over the services they deliver. This will empower millions of public sector workers to become their own boss and help them to deliver better services.

Management of NHS hospital productivity

Hospital productivity has fallen over the last ten years. There have been significant increases in funding and hospitals have used this to deliver against national priorities, but they need to provide more leadership, management and clinical engagement to optimise the use of additional resources and deliver value for money.

“Over the last ten years, there has been significant real growth in the resources going into the NHS, most of it funding higher staff pay and increases in headcount. The evidence shows that productivity in the same period has gone down, particularly in hospitals.”

Amyas Morse, head of the National Audit Office, 17 December 2010

Hospital productivity has fallen over the last ten years, according to the National Audit Office. Over the period since the 'NHS Plan' in 2000 there have been significant increases in hospital funding, to deliver improvements in the patient care, and designed in part to increase productivity. Hospitals have used their increased resources to deliver against national priorities, but they need to provide more leadership, management and clinical engagement to optimise the use of additional resources and deliver value for money.

About The Program

The aim of the program was to develop a charter of healthcare rights for all people receiving or seeking health care in all settings in Australia.

On 22 July 2008, Australian Health Ministers endorsed the Australian Charter of Healthcare Rights and recommended its use nationwide.

A [media release](#) and the [Australian Charter of Healthcare Rights \(PDF 376 KB\)](#) are available for download.

A modo de conclusión

- La evaluación y comparación dentro y entre los Sistemas de Salud están en función del contexto político, social y cultural de cada país: de la calidad de su democracia;
- Importancia de buenos sistemas de información con definiciones comunes;
- Los sistemas de salud son “experimentos naturales” de los que es obligado aprender, conociendo y evitando los riesgos del “contrabando de ideas” (Evans)
